Cheonkyungjae, located at the entrance of village full of water, the foot of Guryong Mountain, is surrounded by lush forests and boasts a beautiful view. However, due to the limit of development of the surrounding mountains and parks, this place became a atypical, irregular land. Thus, the layout and appearance was planned according to the form of the earth by keeping view sight and protecting individual's privacy.

First, the exterior in the form of 'c' was applied with the 'Nuha' entry method, which means the flow through the bottom of the house, resulting the gap making the entry more bright. Along with the long staircase, there is large and wide grass yard and the rear mountain at a glance, so that the green landscape is naturally flowed into the inside, so that the finished fiving space is filled with freshness.

If you come into this place alone, the light reflected from ceiling attracts eye catching. The living room is contrasted with exterior through various finishing materials such as oak wood, exposed concrete, and embellished bricks. And the honeycomb-shaped wood structure is installed on the

ceiling, which makes the space more colorful.

Living noom, kitchen, and dining room are made in wood materials, and the the beige bricks around fireplace make warm and unified atmosphere. In addition, the space spread out of the window is making harmony with light and wind, which makes the space for contemplation in this bustling city, in particular, the sound of falling dripping water sound adds more flavor into the space in rainy days. The main bedroom having windows heading to southeast is bright with plenty of natural light and great views, leaving lingering notes by adding wallpaper of the landscape of Plum pictures on the wall. The second floor has family room, bedroom, and study room, and so on, by embracing Guryong mountain as a frame through terrace. The study room can be accessed with a separate external staircase, and this resulted in the private space and the small but nich Sarangkale at the Same time.

The place characterizing a quiet and secluded residential area in lined apartments in Seoul makes it possible to dream about peaceful rural life with water, wind, earth, wood.

구용산 자격, 등이 많은 생마을 초점에 위치하는 천경자는 등당한 수염에 들러 쌓여있어 아름다운 경관을 자형한다. 하지만 주변의 신권 공원 등으로 인한 개발 제한으로 결국 이곳은 반듯하지 않은 비행확인 대자를 갖게 됨에 따라 배치와 의관의 형태는 대자를 따라 계획하였으며 조임을 유지하여 개인의 사성활을 보호 하는데 중점을 두었다.

인자, 'ㄷ'형태로 배치한 외부는 집의 하무를 통과해 들어오는 '누하補 TT 산양하식을 작용하였으며, 전상의 밤아던 등은 하늘을 담아내 전입교를 밝고 짜여하게 만들고 있다. 안구의 긴 개단을 지니면 넓은 전다 마당과 첫산이 한는에 들어오는 조경을 통해 주면 녹지 흐름이 내무까지 자연스롭게 이어지며 무름이 가득한 추가공간을 완성하고 있다.

아파트가 즐비한 서울에서 한적하고 고즈넥한 주거 공간을 선보이는 이곳은 물, 바람, 흙, 나무 등의 자연과 벗 삼은 전원생활을 꿈꾸게 하고 있다.
